

Order Form

Q FWE operates a dedicated FWE projects database, monitoring projects and their supply chain from early planning to commissioning and O&M. This is the only database exclusively focusing on the Floating Wind Energy Industry's policies, projects, technology and economics. It provides critical insight in data relationships between companies' applied technology and regional requirements. Q FWE produces from this database annually a global FWE map.

Q FWE WORLD MAP 2018

This map is the only complete overview of all current and mid-term planned global Floating Wind projects. In mid-2018, **3,500 maps** will be distributed to the core of the FWE industry leaders and supply chain companies around the world. This is the only map with **true distribution** and thus creates exposure with your message visible on the walls of offices and meeting rooms for at least one year.

Furthermore the map will be distributed at the WindEurope conference & WindEurope Energy in Hamburg, Germany 25-28 September and at other relevant events in Europe and the US.

Printed Map Sponsorship **\$4,500**
120 x 80mm Landscape
2017 advertisers receive 15% discount
